## Getting Started - short courses

These courses provide a comprehensive look at how to teach computing in each year, using the Teach Computing Curriculum. You will be guided through the topics and skills taught in each year and understand how they fit into the wider Teach Computing Curriculum. You will also have a go at many of the activities that you will teach your class and discuss the practicalities of running them in your setting. Designed for any teacher who would like the confidence to teach computing effectively in their own classroom. You'll take-away a full computing curriculum package ready-to-teach and will learn how to further develop your capability in this exciting and vital subject.
